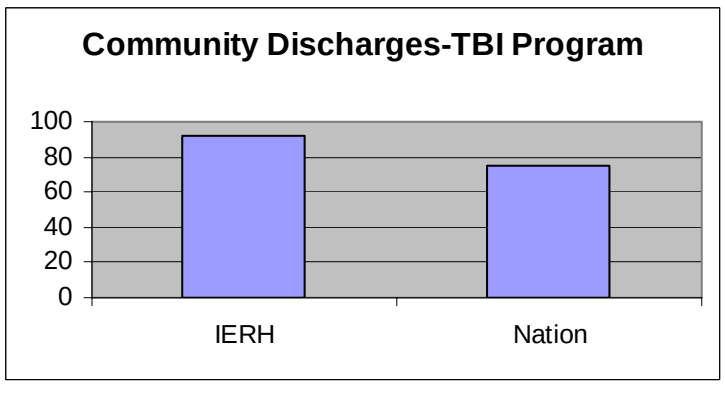
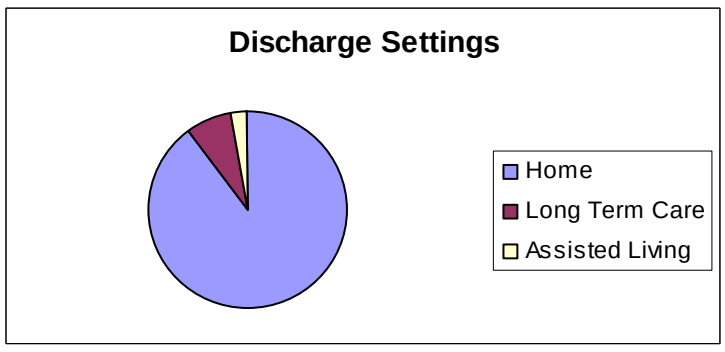
TRAUMATIC BRAIN INJURY PROGRAM

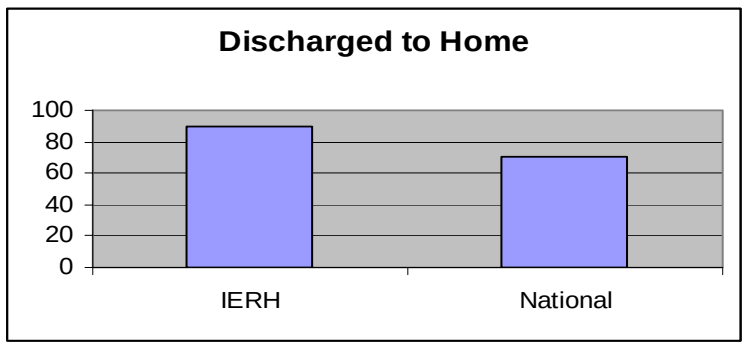
Reporting Period: Year to Date 2004 (Report as of 01/07/05)
Number of Patients in Sample: 39 **Average number of treatment hours:** 3

92.31% of our patients this year have been able to return to their community after discharge.
(This is 17.25% above the national percentage rate of 75.06% and 7.31% above our target goal of 85%)!

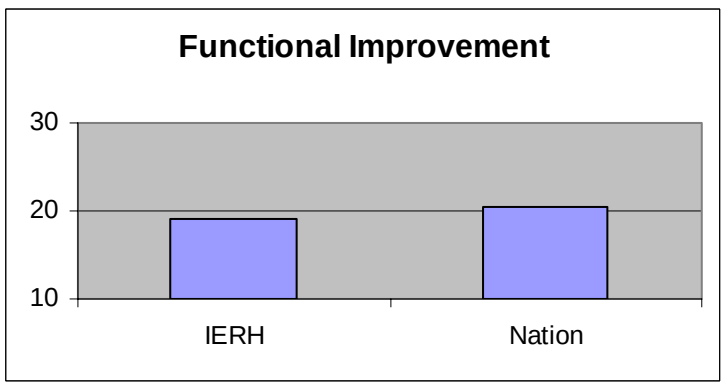


89.74% have gone home (compared to 70.71% national!
7.69% have gone to a long-term care facility (i.e. Skilled Nursing Facility or Subacute Setting)
2.56 % have been discharged to Assisted Living.

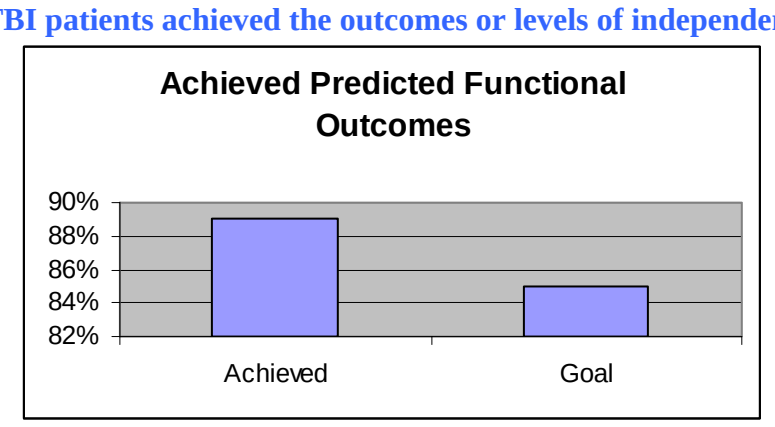




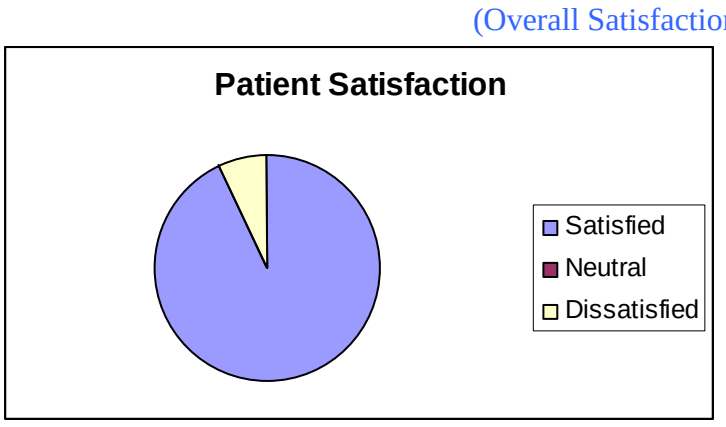
Our patients made an average functional change of 19.18 points.
This is only one point lower than the national average (20.56) despite the fact that our patients entered our system at an average of 59 days post onset vs. the national average of 19.97 days post onset!

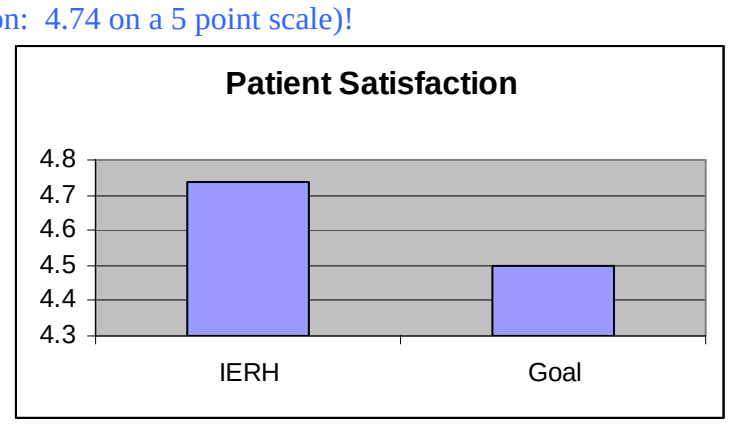


89% of our TBI patients achieved the outcomes or levels of independence predicted!



93% said they would return to our program if they future need!
(Overall Satisfaction: 4.74 on a 5 point scale)!





Additional Trivia:
Of the patients with TBI we served this year, 72% were males and 28% were females.
The average age for the patients we saw this year was 37.08.
